

Trainer: Nilesh Ghule

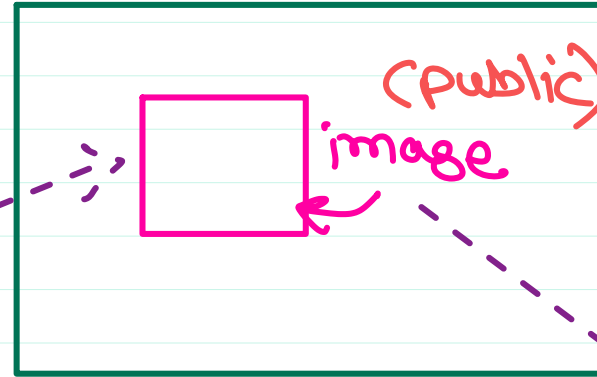

docker hub signup → docker registry
e.g. docker hub

- ① docker login
- ② docker push

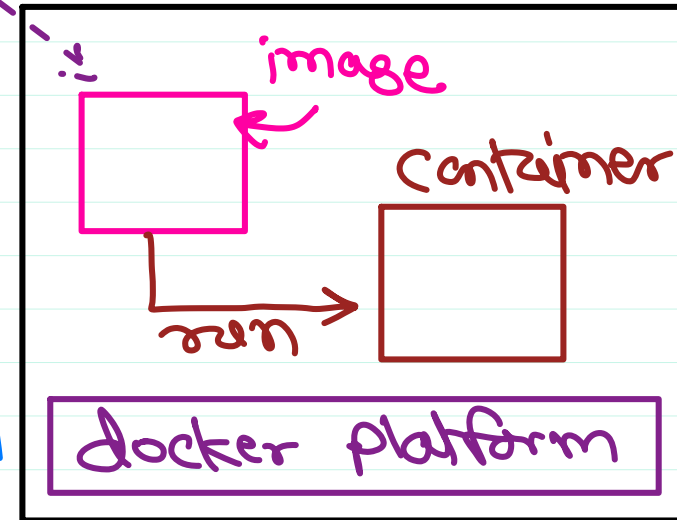

dev machine

while pushing the
img ensure that
the img is tagged
with the dockerhub
username.
otherwise "docker push"
fails.

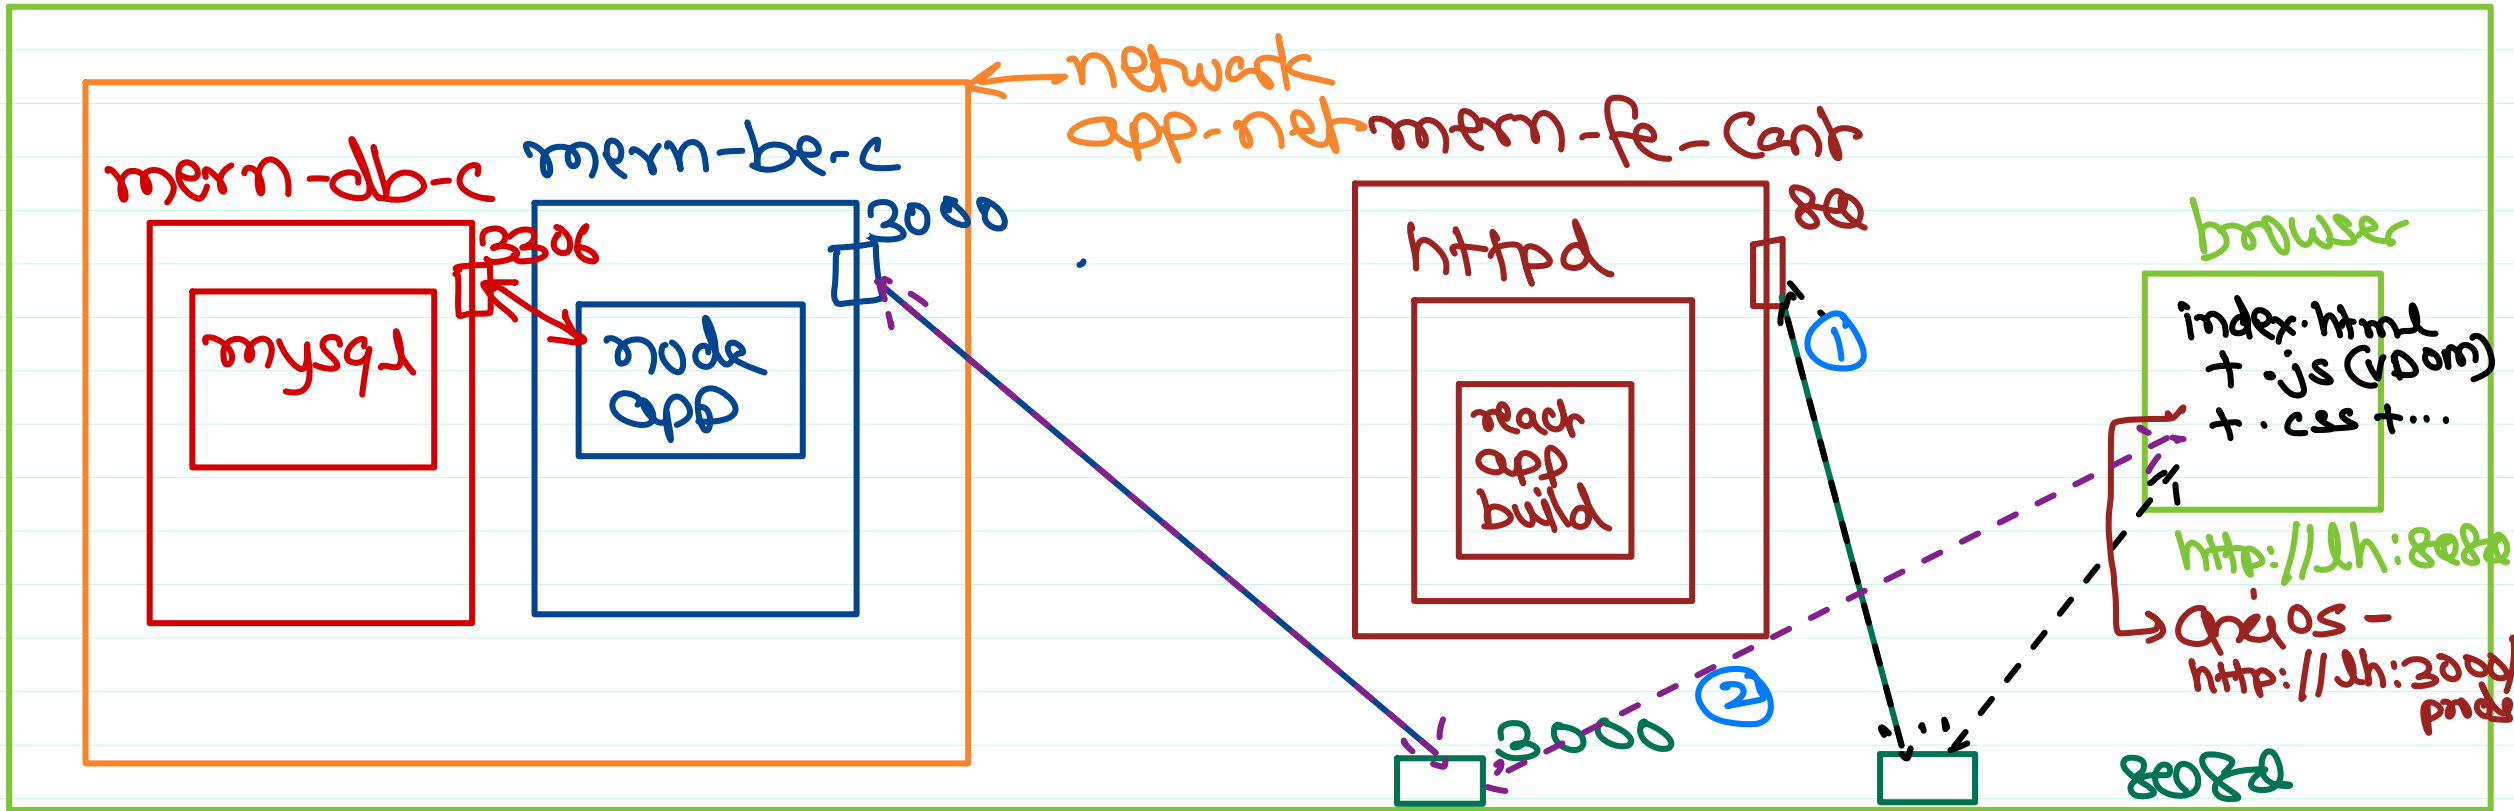

- Two ways to tag 'img':
- ① docker build -t user/img .
 - ② assign new tag to already
built img ...
docker tag
 - ③ docker pull

client machine
cloud

host

Thank You!
